Insights from Employee Attrition Analysis

- 1. Healthy but Uneven** Overall attrition is 16.12%, within the industry benchmark but specific roles and departments show alarming spikes that need immediate attention.
- 2. Young Talent is Walking Out** Employees aged 18–24 have the highest attrition at 39.18% nearly 2.5x the company average, signaling a fresh talent retention crisis.
- 3. Overtime Drives Burnout** 28.3% of attrited employees worked overtime a clear indicator that burnout and poor work-life balance are pushing employees out the door.
- 4. Sales Reps are Underpaid and Overworked** With the highest attrition rate and just \$3K average income, Sales Representatives are the most at-risk group in the organization.
- 5. Single Employees Leave the Most** Single employees leave at 25.53% more than double the rate of divorced employees due to lower financial commitments and higher risk appetite.
- 6. Pay Gap Tells the Real Story** Attrited employees earned \$2K less per month than retained ones making compensation the single strongest retention lever available.
- 7. R&D Losing Valuable Talent** Despite being the most skill-intensive department, R&D records the highest departmental attrition at 9.05% a costly and hard-to-replace loss.
- 8. Travel Frequency Hurts Retention** Frequent travelers leave at nearly 6x the rate of non-travelers suggesting demanding travel schedules are a significant dissatisfier.
